

**WSCAD 2023**

XXIV Simpósio em Sistemas Computacionais de Alto Desempenho

17 a 20 de outubro, 2023 — Porto Alegre, Brasil

# New Kids on the Unblocking: Strategies to Overcome Blocking Networks

Caio Moraes, Jeronimo Penha, José Nacif , **Ricardo Ferreira**  
Universidade Federal de Viçosa

13 a 15 de maio de 1987  
Gramado - Brasil

# I SIMPÓSIO BRASILEIRO DE ARQUITETURA DE COMPUTADORES Processamento Paralelo

WSCAD 2023

## 19<sup>th</sup> International Symposium on Computer Architecture and High Performance Computing

October 24-27, 2007 Gramado, RS – Brazil

# SBAC-PAD

# 2007

# Summary

WSCAD 2023

- Blocking or non-blocking ?
- Multistage Networks and Coarse-Grained Reconfigurable Arrays (CGRAs)
- Placement and Routing
- Conclusions

## Blocking, non-blocking or Rearrangeable non-blocking ?

- 1953 Clos Network - Telecommunications Central
- 1962 Benes Network - Rearrangeable
- 1976 Omega or Shuffle Exchange
- Golden Age 1980 -> 2000
- Multistage Interconnection Network (MIN)
  - Cost  $O(n \log N)$  < Crossbar  $O(N^2)$
  - Routing  $O(\log N)$

# Permutation and Stages

Permutation

$$P(0,1,2,3) = 2,1,0,3$$

$$4! = 24$$

4 switches =  
 $2^4 = 16 < 24$   
Blocking !

U  
T  
S

## Multicast (rearrangeable)

### 4x4 No Extra levels

- 4 switches =  $4^4 = 256$  = 256 permutations w/ repeat
- However there are:
  - 112 blocking permutations....
- Extra Levels 6 switches =  $4^6 = 4096 > 256$ 
  - Rearrangeable Non Blocking
  - 48 patterns has only 2 configurations (hard) 0.04%
  - 4 patterns has 176 configurations (easy) 5%

## Multicast (rearrangeable)

### 8x8 No Extra levels

- 12 switches =  $4^{12} = 16M = 16M$  permutations
  - However 97% of patterns are blocking !
- Extra Level 20 switches =  $4^{16} = 4G > 16M$ 
  - 60% or 10M patterns are Blocking
  - 256k patterns has 2 configurations in 4G (hard)
  - 8 patterns has 3M configurations (easy)

# Multistage and Coarse-Grained Reconfigurable Array

# Placement and Routing

# Placement and Routing

# Placement and Routing Strategies

- Random
- Greedy Approach
- Greedy + Local Search
- Simulated Annealing

## Large Network **256 x 256**

- $10^{681}$  huge search space
- Configuration Workload
  - 128 connections in a 256 Network = 50% workload
  - 192 in 256 = 75% workload
  - less connection less conflict in Extra Level Coding
  - less conflict in Rearrangeable non-blocking Space

# 1 Million Random Permutation in a **256 x 256**

# Low Workload Placement and Routing **256 x 256**

Workload	Rnd	Greedy	Local Search	Sim.Anneal
126 edges	2 extra 100%	2 extra 100%	<b>no extra</b> 100%	<b>no extra</b> 100%
138 edges	4 extra 84.4%	4 extra 83.3%	<b>no extra</b> 100%	<b>no extra</b> 100%

# Medium Workload Placement **256 x 256**

Workload in edges	Rnd	Greedy	Local Search	Sim.Anneal
188	80.5%	82.4%	99.5%	100 % !
189	74.6%	74.6%	99.5%	2 extra
208	79.3%	78.8%	99.5%	3
212	82.1%	75.0%	99.5%	3
213	80.8%	77.9%	98.6%	2

**no solution even 4 extra levels**

**40 edges fails...**

**one edge...**

# Medium Workload Placement **256 x 256**

Workload in edges	Rnd	Greedy	Local Search	Sim.Anneal
223	87.5%	82.4%	2 extra	1 extra
224	99.5%	3 extra	<b>No extra</b>	<b>No extra</b>
238	90.5%	90.5%	4 extra	FAIL ! 1 edge
255	85.0%	<b>No extra</b>	<b>No extra</b>	1 extra
256	99.5%	3 extra	2 extra	1 extra

Pipeline (ideal for Omega Network)

# High Workload Placement **256 x 256**

Workload in edges	Rnd	Greedy	Local Search	Sim.Anneal
223	87.5%	82.4%	2 extra	1 extra
224	99.5%	3 extra	<b>No extra</b>	<b>No extra</b>
238	90.5%	90.5%	4 extra	FAIL ! 1 edge
255	85.0%	<b>No extra</b>	<b>No extra</b>	1 extra
256	99.5%	3 extra	2 extra	1 extra

Synthetic Graph

# Execution Time Placement **256 x 256**

Rnd	Greedy	Local Search	Sim.Anneal	OpenMP
1ms	10ms	2.3 sec	93.6 (10x)	16 (10x) 6 times faster

# Conclusions

- Huge Space  $10^{681}$  -> hard to find rearrangeable code
- Improve Greedy solutions by using S.A. and Local Search
- up to 2-3x faster CGRA execution Time up-to 2x smaller
- Next Steps improve even more:
  - Reinforcement Learning, Graph Neural Networks
  - GPU and Optimizations
